

# ULTRACHEM LABS Legacy

DECADES OF EXCELLENCE

## EST 1991 High Gloss Flex Gold

### REIMAGINED

Nearly four decades ago, Ultra Chem Labs introduced a truly revolutionary floor finish: High Gloss Flex Gold. At the time, the market had never seen anything like it. Its exceptional flexibility across multiple surfaces—combined with outstanding durability—helped define what Ultra Chem Labs stands for. With unique flexing performance, non-yellowing polymers, and fast dry times, Ultra Flex Gold became the foundation of the ultimate “no-strip” program.

High Gloss Flex Gold ‘Legacy’ reimagines that original breakthrough with new technology built for today’s fast-paced environments. It delivers the same fast-drying, bottom-up drying performance that sets Ultra Chem Labs floor finishes apart, while

adding an advanced Organo-Titanium Weave Polymer engineered into the formulation. This polymer allows the coating to bend and redistribute impact energy across the finish, resulting in an exceptionally flexible floor finish with strong adhesion to rubber and luxury vinyl tile (LVT).

Unlike conventional finishes that can make resilient floors feel harder underfoot, the flexibility of the Organo-Titanium Weave Polymer helps rubber flooring and LVT maintain their comfort—supporting reduced standing fatigue for users.

1 1991

1991 - UCL formulates and releases original High Flex ‘Gold’ Formula.

2 2013

2013 - Formula is adjusted to increase chemical resistancy

3 TODAY

TODAY - Reimagined Legacy Edition released to honor the original High Flex Gold formula while incorporating advanced Organo-Titanium Weave Polymer Technology.
